## Calculation Policy

Addition

|  | Objective | Concrete | Pictorial | Abstract |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { Year } \\ & \mathrm{R} / 1 \\ & \hline \end{aligned}$ | Number bonds of $5,6,7,8,9$ and 10 <br> Combining two parts to make a whole: partwhole model | Use cubes, numicon and others to add two numbers together. <br> Use numicon and cubes to show number bonds. |  | $2+3=5 \quad$ Use the part- <br> $3+2=5 \quad$ whole model <br> $5=3+2 \quad$ to move into $5=2+3$ <br> the abstract. |
| Year 1 | Counting <br> Starting at the bigger number and counting on | Start with the larger number on the bead string and then count on to the smaller number 1 by 1 to find the answer. | $5+3=8$ <br> Start with the larger number on the bead string and then count on to the smaller number 1 by 1 to find the answer. | $5+3=8$ <br> Place the larger number in your head and count on the smaller number to |
| Year 1 | Re-grouping to make 10. | eveccece <br> Start with the biggest number and use the smaller number to make 10 . <br> Use numicon to help with making those links to 10 . |  | $7+4=11$ <br> If I am at seven, how many more do I need to make 10. How many more do I add on now? |

## Addition

|  | Objective | Concrete | Pictorial | Abstract |
| :---: | :---: | :---: | :---: | :---: |
| Year 2 | Adding 3 single digit numbers | $4+7+6=17$ <br> Put 4 and 6 together to make 10. Add on 7. <br> Following on from making 10 , make 10 with 2 of the digits (if possible) then add on the third digit. <br> Use numicon to make those number bonds to 10. | Add together three groups of objects. Draw a picture to recombine the groups to make 10 . | $\begin{aligned} (4)+7+6 & =10+7 \\ & =17 \end{aligned}$ <br> Combine the two numbers that make 10 and then add on the remainder. |
| Year 2 | Column method without regrouping | 24+15= <br> Add the ones together first and then the tens. Children use base 10.. <br> When children are confident with place value, place value counters can be introduced. | After the children are confident using the manipulatives, children can draw their own sticks and stones. <br> Later the children can draw place value counters. | $24+15+$   <br> 20 4  <br> 10 5 Children use <br> numbers instead <br> of pictures. <br> $30+\quad 9=39$   <br> When children are secure with place value and the strategy, the compact method should be introduced in KS2. <br> 24 <br> 15 <br> 39 |

## Addition

Subtraction

|  | Objective | Concrete | Pictorial | Abstract |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { Year } \\ & \mathrm{R} / 1 \end{aligned}$ | Taking away ones | Use physical objects, counters, cubes etc. to show how objects can be taken away. $6-4=$ | Objects can be drawn and then crossed out to show what has been taken away. <br> Children could draw tens and ones and cross out. | $\begin{aligned} & 4-2=2 \\ & 15-3=12 \end{aligned}$ |
| $\begin{aligned} & \text { Year } \\ & \mathrm{R} / 1 \end{aligned}$ | Counting backwards | Make the larger number in your subtraction. Move the beads along your bead string as you count backwards in ones. <br> Use counters and move them away from the group as you take them away counting backwards as you go. | Count back on a number line or number track. <br> Start at the bigger number and count back the smaller number, showing the jumps on the number line. | Put 13 in your head, count back 4. What number are you at? Use your fingers to help. |
| Year 1 | Using number bonds <br> Part-whole model | Link to addition-use the part whole model to explain the inverse. <br> If 10 is the whole and 6 is one of the parts-what is the missing part? <br> Numicon to reinforce number bond knowledge. | Use a pictorial representation of objects to show the part part whole model. <br> 8 goldfish <br> Use bar models to show the link between addition and subtraction. | Move to using numbers within the part whole model. |

## Subtraction

|  | Objective | Concrete | Pictorial | Abstract |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \text { Year } \\ & \mathrm{R} / 1 \end{aligned}$ | Make ten | $14-9=$ <br> Make 14 on the ten frame. Take away the four first to make 10 and then takeaway one more so you have taken away 5 . You are left with the answer of 9 . | Start at 13. Take away 3 to reach 10. Then take away the remaining 4 so you have taken away 7 altogether. You have reached your answer. | $17-8=$ <br> How many do we take off to reach the next 10? <br> How many do we have left to take off? |
| $\begin{aligned} & \text { Year } \\ & \mathrm{R} / 1 \end{aligned}$ | Counting on - finding the difference. | Compare amounts and objects to find the difference. <br> Use cubes to build towers or make bars to find the difference. <br> Use basic bar models with items to find the difference. |  | Hannah has 23 sandwiches, Helen has 15 sandwiches. <br> Find the difference between the number of sandwiches. |
| Year 2 | Column method without regrouping | Use base 10 to make the two numbers like addition. Use the equipment to model how to subtract and write the numbers at the bottom. | The children can draw sticks and stones to represent the two digit numbers. Lay it out in the same way as the base ten and then physically cross out the amount, then count the remainder to find the answer. | Children partition the number and then layout them out in a column. |

Subtraction

|  | Objective | Concrete | Pictorial | Abstract |
| :---: | :---: | :---: | :---: | :---: |
| Year 3 | Column method without regrouping continued. | When children are secure with place value, they could use the place value counters in the same method. | When the children are secure with place value they could draw their place value counters | When children are secure they can move to more formal Column subtraction. $\begin{array}{r} 78 \\ -\quad 43 \\ \hline 35 \end{array}$ |
| Yea | Column method with regrouping. | Use base 10, lay out in the same way to establish the column method. Children exchange one ten and replace with ten ones. Begin with one exchange and then move to two. | When children are secure, they can draw the sticks and stones and exchange by crossing out the ten and adding ten ones. | Children can start their formal written method by partitioning the number into clear place value columns. |
| $\begin{aligned} & \text { Year } \\ & 3 / 4 / 5 / \\ & 6 \end{aligned}$ | Column method with regrouping Continued. | When children are secure with place value, they can use the place value counters with the same method. | When they are confident with the equipment, the children can draw the place value counters and exchange by crossing out the counters. | Children move onto a more compact method when they are secure. <br> This will lead to an understanding of subtracting any number including decimals. |

Multiplication

|  | Objective | Concrete | Pictorial | Abstract |
| :---: | :---: | :---: | :---: | :---: |
| Rec | Doubling | Use practical activities to show how to double a number. | Draw pictures to show how to double a number. <br> Double 4 is 8 . | Partition a number and then double each part before recombining back together. |
| Year 1 | Counting in multiples | Count in multiples supported by concrete objects in equal groups. | Use a number line or pictures to continue to support counting in multiples. | Count in multiples of a number aloud. <br> Write sequences with multiples of numbers. <br> 2,4,6,8,10 <br> 5,10,15,20,25 |
| Year 1 | Repeated <br> addition | Use different objects to add equal groups. | There are 3 plates. Each plate has 2 star biscuits on. How many biscuits are there? $2+2+2=6$ | Write addition sentences to describe objects and pictures. $2+2+2=6$ |

Multiplication

## Multiplication

|  | Objective | Concrete | Pictorial | Abstract |
| :---: | :---: | :---: | :---: | :---: |
|  | Column <br> multiplication. <br> Expanded method | Show the link with arrays to first introduce the expanded method. | Once children are secure with the concept, the children can move onto pictorial representation. | Start with long multiplication, reminding the children about lining up their numbers clearly in columns. $\begin{aligned} & 18 \\ & \times \frac{13}{24}(3 \times 8) \\ & 30(3 \times 10)) \\ & 80(10 \times 8) \\ & \frac{100}{234}(10 \times 10) \end{aligned}$ |
| Y4/5/6 | Compact method. | Children can continue to be supported by place value counters at the stage of multiplication. <br> It is important at this stage that they always multiply the ones first and note down their answer followed by the tens which they note below. | Bar modelling and number lines can support learners when solving problems with multiplication alongside the formal written methods. | Start with long multiplication, reminding the children about lining up their numbers clearly in columns. <br> If it helps, children can write out what they are solving next to their answer. $\begin{aligned} & 32 \\ & \times \quad 24 \\ & \hline 8(4 \times 2) \\ & 120(4 \times 30) \\ & 40(20 \times 2) \\ & \cline { 1 - 1 } 7(20 \times 30) \end{aligned}$ <br> This moves to the more compact method. |

Division

|  | Objective | Concrete | Pictorial | Abstract |
| :---: | :---: | :---: | :---: | :---: |
| Rec | Sharing | I have 10 cubes, can you share them equally between two people? | Children use pictures or shapes to share quantities. $10 \div 2=5$ | Share 8 buns between two people. $10 \div 2=5$ |
| Year 1 | Grouping | Divide quantities into equal groups. Use cubes, counters, objects or place value counters to aid understanding. | Use a number line to show jumps in groups. The number of jumps equals the number of groups. <br> Think of the bar as a whole. Split it into the number of groups you are dividing by and work out how many would be within each group. $\begin{aligned} & 10 \div 5=? \\ & 5 \times ?=10 \end{aligned}$ | $10 \div 5=2$ <br> Divide 10 into 5 groups. How many are in each group? |
| Year 1 | Division with arrays | Link division to multiplication by creating an array and thinking about the number sentences that can be created. $\begin{gathered} \text { Eg } 15 \div 3=5 \\ 5 \times 3=15 \\ 15 \div 5=3 \\ 3 \times 5=15 \end{gathered}$ | Draw an array and use lines to split the array into groups to make multiplication and division sentences. | Find the inverse of multiplication and division sentences by creating four linking number sentences. $\begin{aligned} & 5 \times 3=15 \\ & 3 \times 5=15 \\ & 15 \div 5=3 \\ & 15 \div 3=5 \end{aligned}$ |

## Division

|  | Objective | Concrete | Pictorial | Abstract |
| :---: | :---: | :---: | :---: | :---: |
| $\begin{aligned} & \hline \text { Year } \\ & 3 / 4 / 5 / \\ & 6 \end{aligned}$ | Short division | The children use place value counters to partition the numbers into tens and ones. <br> This method teaches children to take groups of the divisor from the dividend. <br> The children write the number of complete groups above. Because there are some left over, they exchange each ten for ten ones. <br> Then they take groups of 4 from the ones. Any left over become the remainder. | The children use place value counters to partition the numbers into tens and ones. <br> This method teaches children to take groups of the divisor from the dividend. <br> The children write the number of complete groups above. Because there are some left over, they exchange each ten for ten ones. <br> Then they take groups of 4 from the ones. Any left over become the remainder. | Begin with divisions that divide equally with no remainder. <br> Move onto divisions with a remainder. <br> Finally move into decimal places to divide the total accurately. |

Division

|  | Objective | Concrete | Pictorial | Abstract |
| :---: | :---: | :---: | :---: | :---: |
| Year 6 | Long division | $2544 \div 12$ <br> How many groups of 12 thousands do we have? None. <br> Exchange 2 thousand for 20 hundreds. $1 2 \longdiv { 0 } \longdiv { 2 ^ { 2 } 5 4 4 }$ <br> How many groups of 12 are in 25 hundreds? 2 groups. Circle them. We have grouped 24 hundreds so can take them off and we are left with one. <br> Exchange the one hundred for ten tens now we have 14 tens. How many groups of 12 are in 14? 1 remainder 2. <br> Exchange the two tens for twenty ones so now we have 24 ones. How many groups of 12 are in 24? 2. $\begin{array}{r} \begin{array}{r} 0212 \\ 1 2 \longdiv { 2 5 4 4 } \\ 24 \\ \hline 14 \\ \hline 12 \\ \hline 24 \\ \hline 24 \\ \hline 0 \end{array} \end{array}$ | Instead of using physical counters, students can draw the counters and circle the groups on a whiteboard or in their books. <br> $2315 \div 11=210 r 5$ <br> Use this method to explain what is happening and as soon as they have understood what move on to the abstract method as this can be a time consuming process. | Children will use long division to divide numbers with up to 4 digits by 2 digit numbers. |
